

01

Layne is a water management, mineral exploration and drilling company.

We provide responsible infrastructure solutions for water and minerals, while offering innovative, sustainable services with an enduring commitment to safety, operational excellence, and client satisfaction.

In June 2018, Layne became a wholly-owned subsidiary of Granite Construction, Inc.

ABOUT LAYNE

- Founded 138 years ago Layne is one of the world's largest, most experienced water and mineral service companies.
- Aligned with our Latin American affiliates, Layne Mineral Services is one of the three largest providers of drilling services in the Americas.
- The world's premier mining companies rely on our teams to deliver a high level of expertise and technical competence while maintaining the most stringent safety and environmental standards.

OUR STORY

02

SAFETY

- Safety is about people, not projects.
- Safety is about stories, not statistics.
- Safety is about connecting people.
- Safety is deeply personal.

Our safety culture is underpinned with relationship-based training, shared knowledge, and engagement at every level of our organization.

An authentic commitment from all will elevate our program, ultimately achieving safety, success and zero injuries.

At Layne, we are responsible for making safe choices not only for ourselves, but for those around us. We must take care of each other.

TOTAL RECORDABLE INCIDENT RATE

03

OUR SERVICES

- Coring
- Dual wall reverse circulation
- Flooded reverse
- Directional drilling
- Sonic
- PQ-3, HQ-3, NQ-3 triple tubes/Lexan liners
- Oriented core with ACT III system
- Wireline packer with single and zone testing
- Mechanical packer testing
- Mud rotary W/ SPT testing
- Piezometer and TDR cable installations
- Casing advance
- Down-hole hammer
- Air / mud rotary
- Stratex / Odex casing advance systems
- Directionally steered core / rotary wells
- Electrode installation

DRILLING TECHNOLOGY

DTC OBJECTIVES

- Increase safety
- Increase productivity
- Decrease costs associated with Layne's drilling operations
- Develop technology not commercially available to meet the needs of new or emerging markets

Layne's Drilling Technology Center (DTC) is strategically located at the corporate office near Houston, Texas, an area rich in drilling history and expertise. The group consists of a multi-generational team of engineers with vast experience in all major drilling markets and techniques.

AUTOMATED ROD HANDLING

Born from the need to reduce hand injuries and operator fatigue, the Layne patented Automated Rod Manipulator (ARM) provides truly hands-free rod handling for its legacy fleet of diamond core drills. Our entire fleet of rotary rigs is equipped with reliable and proven rod loaders designed to work explicitly with each machine. All Layne rigs are equipped with hands-free hydraulic wrenches to safely make and break each connection within the drill string.

A fully loaded rod storage magazine, containing up to one mile of drill rod, can be safely transported to site using the Universal Track Carrier which can conquer the most rugged of terrains and environments.

Smart inventory management allows us to send the least worn rod to the bottom of the hole. We use a continuous rod inventory rollover system to ensure even wear, minimize rod failure and increase safety on the jobsite.

07

LATIN AMERICAN AFFILIATES

Our longtime affiliates, Geotec Boyles Bros., have led the market in drilling and related services in Chile and Peru for decades. Our combined presence in the Americas is unparalleled, as is our ability to operate at the highest level of safety, technology, and environmental responsibility for our valued mining clients.

INTERNATIONAL DIRECTIONAL SERVICES

Our subsidiary International Directional Services (IDS) offers expertise for borehole deviation surveys and directional drilling services in the mineral, energy, and civil markets. IDS provides its customers with five product and service lines in select international markets: downhole deviation surveys, directional drilling services, downhole instrumentation sales and rentals, directional mud motor sales, and borehole geophysics.
